Currently, there exist many differences between the significant indicators related to issues of water and environmental sanitation in Vietnam. Ministries, departments and organizations involved often use other sources and conflict in the efforts to solve the same problem in rural areas.

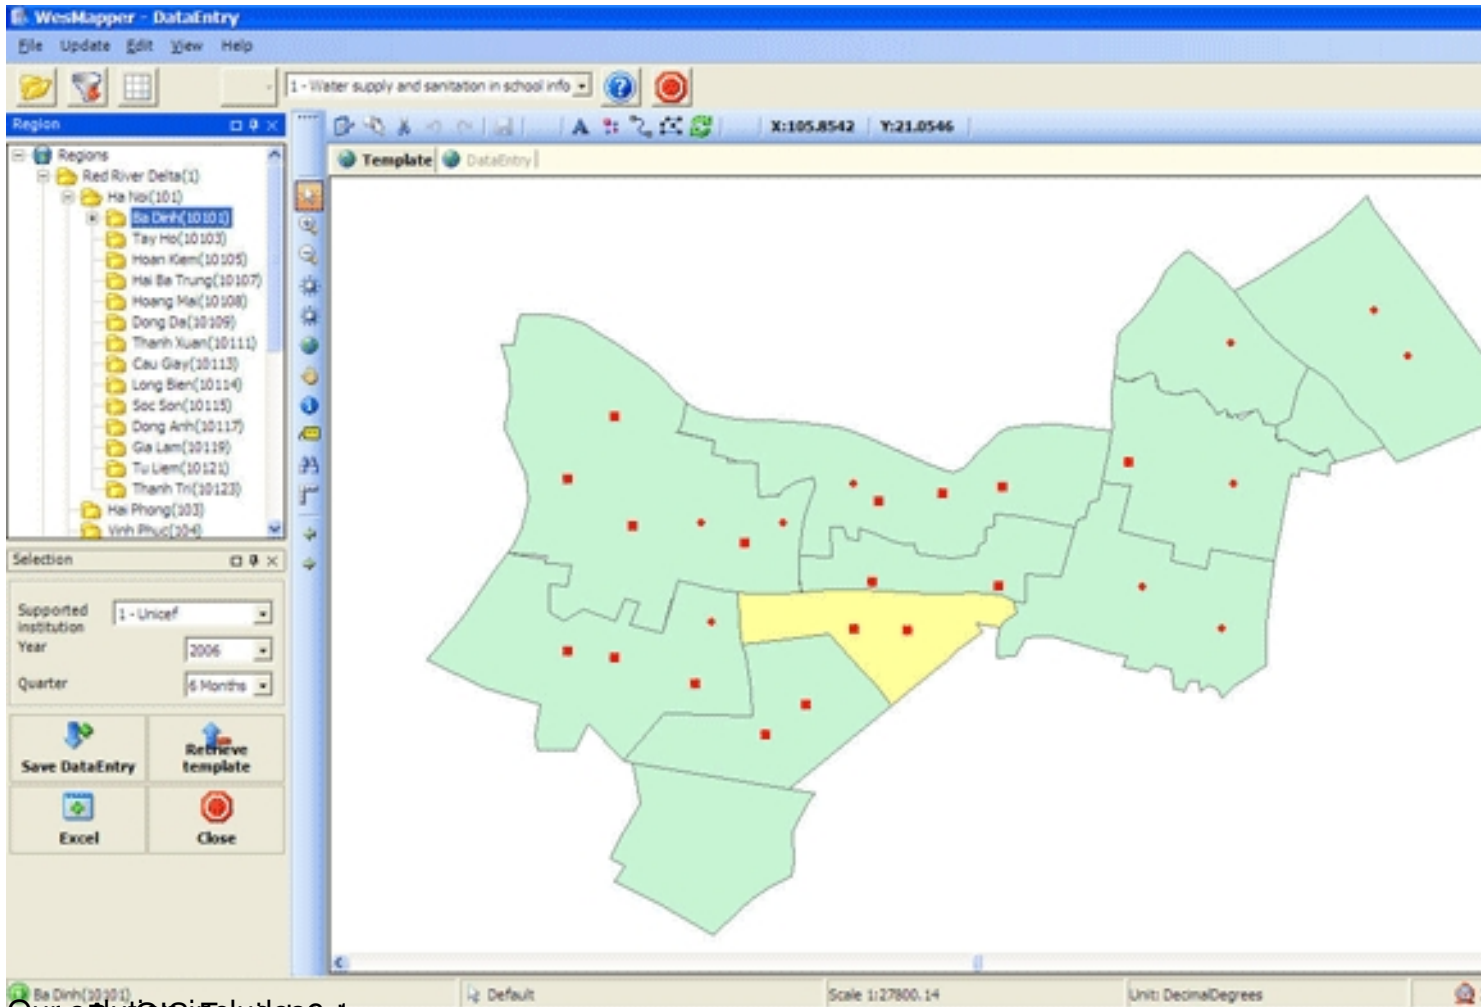

In order to solve this problem, UNICEF, CERWASS and other organizations including The National Target Programs for Rural Water Supply and Sanitation, General Department of Statistics, Ministry of Health, World Bank, DANIDA, AusAID, Luxembourg Government and VidaGIS Company with the cooperative development of a comprehensive system for monitoring water supply and sanitation in rural areas. This system aims to resolve all existing issues which are overlapped and allowed authorities at all levels setting up the plan on the basis of the standard data and accurate comparisons.

This solution is called WESMAPPER developed by VidaGIS based on ArcGIS Engine 9.1 development environment, Using database format personal geodatabase of ESRI.
